Alexa app windows 10

Apps are what make your Windows PC, tablet, phone and Xbox so useful. There are thousands of applications available that allow you to create and consume almost everything. Here you'll find unique and powerful apps that span all categories. Apple and Microsoft haven't always played well with each other, but nowadays it's much easier to live with one foot on Windows 10 and another on iOS. From apps to extend your screen to cloud sync between devices, these are the best apps to use if you're on iOS and Windows 10. These applications are not just types of software that are manufactured by Microsoft and available on iOS. These are apps or services that bring your devices closer together. If you want to know about the best Microsoft apps available on iOS, you can check out this guide. 8 easy ways to make the iPhone X more Microsoft friendly with iPads and iPhones with some of the best screens around, and you can use your iOS device's screen as a second monitor for your PC using Duet Display. The app is made by former Apple engineers who make it simple to extend your PC to your iOS devices. The connection supports full touch support and extends your display to 60fps. In addition to downloading the Duet Display app for \$9.99 from the App Store, you'll also need to download free software on your PC from the Duet Display website. Check the AirServer App Store If you prefer a wireless connection between your iOS and Windows 10 devices, you'll want to check out the AirServer. It allows you to mirror your iOS device's screen on another device through Airplay, Chromecast, and Miracast. AirServer is available for Windows 10 and Xbox One, but it's important to know that the Xbox One and Windows 10 versions of this app are completely separate from payment. The Xbox One version costs \$19.99, and the Windows 10 version costs \$29.99. I reviewed the AirServer for Xbox One last year and still used it regularly. I've found that AirPlay works better than Miracast and I often burst an iPad or Mac if I want to see content on our living room TV. Microsoft Authenticator If you need to sign in to your Microsoft account frequently, you can download the Microsoft Authenticator app to improve the security of your account. To use the app, you need to set up two-step security for your Microsoft account, and then you receive notifications on your iOS device to complete future logins. Microsoft Authenticator supports Touch ID, Face ID, and a PIN, so you have a number of options depending on your hardware or preference. The app is free and available on many platforms, including iOS. See in the Continue App Store on PC Phones and tablets are great for browsing through content, but if you want to continue your browsing experience from your iOS device to your PC, you can Microsoft's own free app, Continue on PC. The app allows you to send a web page to your PC and open it automatically on your computer or be there waiting to be opened later. View the iCloud Cloud App Store you are an Apple iCloud user, you can see your photos directly on your PC. It's relatively easy to set up, but you need to know where to look when you authorize and select which content syncs to your PC. You can refer to our step-by-step guide if you need help. You can choose which content syncs on your devices, including your iCloud photo library, photo stream, downloads, uploads, and more. iCloud plays well with Windows File Explorer and can even be pinned to Quick Access to feel like a native experience. It's free too. Download iCloud for Windows Summing things up While a PC may not have the same integration with an iOS device as a Mac, there are a number of ways you can make both types of devices work together. What's your favorite way to use iOS and Windows 10 together? Have we lost any applications on our list? Let us know in the comments below. We can earn a commission for purchases using our links. Learn more. Alexa is one of the most popular and powerful personal assistants. Amazon is a bit weird with it, though. You can only get the full experience on select Android phones, Amazon Fire devices, and Amazon Echo devices. That makes it a little restrictive. However, you're probably here because you own one of these devices and want Alexa to do more. We can definitely help with that. Here are the best skills and apps for Alexa! Most of the skills that are worth using are for things like smart home technology, checking time and playing music. There are a few other tools that he can use as well. We definitely recommend looking around the official Alexa Skills Guide for more information and more recommendations. Amazon AlexaAny.doAnyPodBig SkyFind My PhoneRead Next: Amazon Alexa: The definitive guideAmazon AlexaPrice: FreeLet's start with the official Amazon Alexa app on Google Play. This is an essential application for many reasons. It allows you to interact with Alexa and Alexa-enabled devices. Most need it for initial setup. However, just like the Google Home app, Alexa can recommend new things, interact directly with devices, and control some things with it. All Alexa owners should not only have this, but use it frequently. It's completely free and you probably already have it anyway. We recommend digging and learning more about it! Any.doPrice: Free/\$2.99 per monthAny.do is one of the few competent apps to list for Alexa. It integrates with Alexa's shopping lists and tasks. It also has mobile apps for iOS and Android. They all sync together. This means that you can ask Alexa to add something to a list and then check that list later on Smartphone. It has a small learning curve. However, most should be able to figure this out quickly enough. The skill is free to download. Mobile versions of the app have a monthly subscription to some of its more advanced features. AnyPodPrice: FreeAnyPod is a podcast skill for Alexa. Podcast support is already in place. But that's better. It has some pretty basic features. You can sign up for sign up listen to signatures, fast forward and rewind, and skip episodes. The app has thousands of podcasts. Also, the voice commands are quite simple and we do not encounter many problems with it. There is a website where you can search with a computer or mobile phone. However, there is no way to just browse podcasts. It's a small mistake, but it should work for most people. Don't forget to check out the Android Authority podcast while you're there! Big SkyPrice: Free with skill purchasesBig Sky is one of the most popular and powerful weather apps for Alexa. It uses the Dark Sky API, a pretty decent weather app on iOS and Android. It tells the temperature, weather conditions and weather alerts for any location you want. This includes some extra things like UV Index, humidity, wind speeds, devassardia points and more. He basically does everything. There's also a premium subscription version with even more features if you need it. However, even the free version has features that most weather skills simply don't have. Find My Phone Price: FreeFind My Phone is a simple tool for Alexa owners. He does what his name says. You ask me to dial your number and it does. Touch helps you find your phone. You simply ask to ring on your phone. The application also supports multiple numbers. So it's usable throughout the family. There is a rather strange setup process for some people, though. Otherwise, your phone may not always ring. We recommend hitting the download link and reading the reviews to learn more. Sound Apps Environments by Invoked AppsPrice: FreeThe Ambient Sounds apps are some of the most popular for Alexa. There are more than a

dozen apps in the series, each with its own sounds. Some of the options include heavy rain, distant thunderstorm, space, forest night and a single app with over 40 sleep sounds. All these apps do exactly what they say they do without any hassle. They are probably the best source of environmental sounds on Alexa right now. They're all free too unless we've lost something. DayPrice Question: FreeQuestion of the Day is hugely popular and one of alexa's best skills. This gives you a new trivia question every day. They can be from literature, science, entertainment, arts and other categories. Correct answers earn points and you can see how other people answered the same question. It's a nice little thing to give you a fun suit every day. It is also completely free and easy to use. Uber or LyftPrice: The free costs/ride varyUber and Lift both have Alexa skills. They both work the same way. You hitchhike to Alexa and the apps send a driver. It works as planned. However, applications could use modifications and improvements. For example, the Uber app works best if you use your uber address book instead of Alexa. Lyft also has some bugs to solve. Both apps are extremely promising, however, and it's really cool to ask alexa for a ride and then get one. We recommend reading user reviews about to take a closer look at their issues. Some fitness tracker appsPrice: FreeSome fitness trackers have native apps for Alexa. This includes Fitbit, Motiv, and a variety of standalone training apps. Some of them are fine, but many of them need more work. Fitbit and Motiv apps let you interact with statistics on your devices. Training apps only set up exercises for you. Fitness is another category that needs improvements in personal assistants. However, they are not terrible, they are simply not great. The motiv skill seems to work just fine, though. Smart Home StuffPrice: FreeSmart home stuff is right in Alexa's wheelhouse. There are a variety of smart home products that work with the platform, including Philips Hue, WeMo, Lix, Honeywell, TP-Link, Sony, GE and more. The apps allow you to control gadgets, lights and collect information from your electronics. Some apps need a little work and are not always easy to set up. However, a little patience and the right products can create really impressive results. Of course, you need smart home technology to make this work. Bonus: IFTTTPrice: FreeAmazon Alexa includes support for IFTTT. IFTTT is an automation platform. You assemble recipes and these recipes make alexa do things on a schedule. For example, you can have Alexa automatically start your Roomba at certain times, automatically start a WeMo coffee maker at the same time every morning, or add notes to Evernote. It requires a little patience and know-how, but you can automate basically anything you want. I personally use this to turn off my Philips Hue lights every morning at sunrise to save electricity. Hit the button see the recipes that Amazon has created on its own. FIND ALEXA RECIPLES HERE! If we've lost any great skill or apps for alexa, tell us about them in the comments below! You can also click here to check out our latest Android apps and game lists! Lists!
